

It is a stable prosthesis work replacing one or more missing teeth in the dental barrier and supported by natural teeth (teeth braces)

There are many types of bridges as:

- Metal: an alloy made of precious metal or alloy palladium or gold.
- Ceramic: made of metal alloy internal (titanium, chromium, gold, etc.) and externally covered by porcelain.
- Zirconium - Porcelain: made of zirconium internally and externally covered with porcelain

The cost of bridge depends from its type.
